Chris suggested rice. We can easily obtain that through our PDP samplers. FYI.

Julie,

Would you have any thoughts for PDP on which commodities might be good ones to suggest based on your work regarding the Glyphosate dietary risk assessment?

David

Hi David,

So I'm preparing in case we (PDP) are asked by the Dept to test for glyphosate. We don't have any grains in the program right now. I

assume the "best" data would be for soybeans, wheat, alfalfa, etc. But we would have to set up with GIPSA to sample, etc. Would any other data, such as on fruits and vegetables that are currently in the program, be of value? Apples, pears, peaches, green beans, etc.

Thanks,
Diana
